Executive Summary

The Versa Loan Management System is being developed to streamline and automate the processes of managing borrowers, loans, repayments, accounting, and institutional oversight. The platform must support both digital and field operations, ensuring flexibility, security, and performance.

1. Project Objectives

- Automate end-to-end loan management lifecycle.
- Improve customer relationship and onboarding experience.
- Enable real-time performance tracking for loans and repayments.

- Comply with regulatory and financial reporting standards.

SCOPE OF WORK

The Versa Loan Management System will serve as a centralized and fully integrated platform to manage all core lending operations and customer interactions. The system will be designed to improve operational efficiency, reduce risk, and enhance service delivery in both digital and field environments.

a) Borrower Profiles

Capture, store, and manage detailed client records including KYC documents, loan history, and account status. This supports efficient client onboarding, verification, and personalized engagement.

b) Loan Origination to Closure

Automate the entire loan lifecycle application, approval, disbursement, repayment, and closure. This ensures speed, compliance, and auditability while reducing manual paperwork and decision fatigue.

c) Collateral Tracking

Digitally register and link collateral to specific loans. Supports valuation, asset documentation, and risk mitigation throughout the loan period.

d) Payment Schedules

Automatically generate and manage borrower payment schedules with support for daily, weekly, and monthly repayment plans, interest calculations, and late penalty triggers.

e) Defaulters Handling

Flag overdue payments automatically, generate defaulter reports, and initiate follow-up workflows for field agents or legal recovery actions.

f) Field Operations

Equip field officers with mobile tools to register new clients, collect repayments, sync data offline, and track loan recovery in hard-to-reach areas.

g) Institutional Accounting and Billing

Handle financial operations such as ledger management, loan-related income tracking, operational costs, and automated billing/subscription management for institutions using the platform.

STAKEHOLDERS

The successful deployment and operation of the Versa Loan Management System will depend on the following key stakeholder groups, each playing a unique role in ensuring the platform's functionality and impact:

a) Loan Officers

Frontline staff responsible for initiating the loan process, conducting borrower interviews, verifying eligibility, and monitoring repayments. They rely on intuitive dashboards and real-time alerts to manage their portfolio effectively.

b) Credit Managers

Review and approve loans based on risk profiles, documentation, and policy compliance. They need detailed reporting, access to credit scoring tools, and performance dashboards for loan books under their oversight.

c) System Admins

Oversee user access, system configurations, and platform performance. Responsible for permission roles, system updates, and audit trail management. They maintain the system's security, scalability, and data integrity.

d) Finance & Accounting Staff

Manage all financial transactions, from disbursements and repayments to investor reconciliations. Require access to ledgers, bank integration logs, and auto-generated reports for internal and regulatory use.

e) Borrowers (Clients)

The primary users of the platform, accessing their loan information, payment schedules, and account statements through web and mobile interfaces. Must be supported with alerts, statements, and accessible.

f) Field Agents

Mobile-enabled officers responsible for community-level operations, collections, and client support. The system must support offline functionality, geo-tagging, and simplified workflows for on-ground reporting.

g) Investors

Fund the loan portfolios and expect transparency and return on investment. The system must give them visibility into portfolio performance, risk categories, yield projections, and automated financial reports.

CORE SYSTEM MODULES OVERVIEW

2. System Administration

`{=html}

<!-- -->
`

a) Handles system-wide settings, user roles, and access control.

b) Create/edit/delete users and roles

c) Define permissions by feature/module

d) Set default configurations (currency, timezone, notifications)

e) Manage system logs and backups

f) Update terms and policies dynamically

g) Generate loan collections schedules for field offices

`{=html}
<!-- -->
`

3. Institutional & Billing Management

a. Enables onboarding and billing of multiple organizations using the system.

b. Register institutions with full profiles

c. Manage billing plans (monthly, annual, usage-based)

d. Assign and monitor subscription limits

e. Automated invoicing and billing status tracking

f. Notify institutions of renewal or suspension

4. Customer Relationship Management (CRM)

a. Central hub for managing interactions, inquiries, and support.

b. Ticket management with SLAs

c. Client message inbox/outbox (email/SMS)

d. Track issue history and resolutions

e. Assign staff to support requests

f. Generate customer satisfaction metrics

5. Accounting

`{=html}
<!-- -->
`

a) Tracks all financial movements across modules and stakeholders.

b) Chart of accounts configuration

c) Loan disbursement and repayment logging

d) Manual and automated journal entries

e) Expense entry and classification

f) Bank and cash reconciliation

g) Generate ledgers, income statements, balance sheets

`{=html}
<!-- -->
`

6. Staff Management

`{=html}
<!-- -->
`

a) Manages internal personnel profiles, performance, and access.

b) Create staff accounts and assign responsibilities

c) Define departmental targets (loan recovery, disbursement)

d) Log attendance and system activity

e) Generate KPI and productivity reports

f) Manage internal notifications and role permissions

CUSTOMER MODULES OVERVIEW

These modules directly support the customer-facing experience and borrower lifecycle management, from registration to loan servicing and post-loan interaction.

7. Clients (Borrowers)

> Manage detailed client profiles and lifecycle.

8. Self-registration and assisted registration forms
9. Capture National ID, phone, address, photo, next of kin
10. Upload and store KYC documents securely
11. Display loan status, contribution history, and risk level
12. View alerts, announcements, or personalized messages

`{=html}
<!-- -->
`

13. Loan Management

> Complete lifecycle management of all loan activities.

14. Loan application form with eligibility pre-check
15. Approval workflow with multi-role review

16. Customizable loan products (interest rate, term, grace period)

17. Auto-scheduling of repayments

18. Partial or early repayment handling

19. Status transitions (pending, disbursed, closed)

`{=html}
<!-- -->
`

20. Collateral Registration Submodule:

`{=html}
<!-- -->
`

21. Record physical or financial assets linked to loans

22. Upload ownership documents, value estimates, images

23. Assign asset to loan ID

24. Loan Defaulters Submodule:

`{=html}
<!-- -->
`

25. Identify clients past due threshold (e.g., 7+ days)

26. Generate defaulter reports by region, field officer

27. Assign recovery actions and follow-up schedules

`{=html}
<!-- -->
`

28. Staff Interface

> Dedicated dashboard and tools for internal users.

29. View assigned loan portfolios
30. Approve/reject loan applications
31. Internal messaging with field officers
32. Action reminders and alerts
33. Performance and task summaries
34. Field Officer Tools

> Mobile-ready interface with offline capability.

35. Register new clients on-site
36. Collect repayments and issue digital receipts
37. Update loan follow-up notes
38. Geo-tag visit locations and sync data later
39. Capture images of collateral or signed contracts
40. Access collections schedules and reminder alerts.

`{=html}
<!-- -->
`

41. Client Accounting

> Dedicated client wallet view and transaction logs.

42. Track disbursements, repayments, penalties
43. Download receipts or contribution statements
44. View loan balance breakdown
45. Wallet top-ups and fund application

`{=html}

<!-- -->
`

46. Investor Management

> Track investment sources and performance transparently.

47. Register and manage investor profiles

48. View investment pools and allocation by loan product

49. Track interest earned, net ROI, and payment schedules

50. Generate downloadable investment statements

51. Approve or withdraw reinvestment instructions

CRM (Future Module to be pushed into Phase 3)

> Will enable two-way engagement and support tracking.

52. Helpdesk ticket submission and updates

53. Chat interface (web and mobile) for real-time support

54. Feedback submission with rating system

55. Auto-assign tickets to support staff based on priority or loan type

`{=html}
<!-- -->
`

56. Client Education Center

> A value-add module aimed at improving borrower literacy, trust, and
> long-term financial well-being. This component is key for first-time
> borrowers and helps reduce default rates.

57. Library of educational content (articles, videos, infographics)

58. Topics: loan management, savings tips, interest rate understanding,

repayment discipline

59. Accessible via mobile and web

60. Gamified learning: quizzes with badges or points

61. Auto-recommend lessons based on client status (e.g., before disbursement)

62. Language options for regional relevance

63. Track client engagement with content for behavioral insights

FUNCTIONAL REQUIREMENTS (DESCRIPTION BY MODULE)

64. System Admin

`{=html}
<!-- -->
`

65. Create, edit, and deactivate user roles and access levels.

66. Manage global platform settings (timezone, currency, date format).

67. Configure system-wide alerts and notification templates (email/SMS/push).

68. Manage language packs and system translations.

69. Create and manage feature flags (toggle modules on/off).

70. View audit trail of administrative actions.

`{=html}
<!-- -->
`

71. Institutional & Billing Management

`{=html}
<!-- -->
`

72. Register and configure institutions (name, logo, legal info, tax ID, etc.).

73. Assign billing plans (tiered, usage-based, flat-rate).

74. Monitor active vs. inactive institutions.

75. Generate and send recurring invoices.

76. Suspend access upon overdue payments with grace periods.

77. Integration with payment gateways for fee settlement.

`{=html}
<!-- -->
`

78. CRM (Implementations to be done in Phase 3)

`{=html}
<!-- -->
`

79. Ticket management system for member support.

80. Assign, tag, and prioritize support tickets.

81. Link support tickets to member profile or loan.

82. Upload attachments (PDFs, images) to tickets.

83. Set automated responses and resolution SLA timers.

84. Generate reports on ticket types, resolution time, satisfaction scores.

`{=html}
<!-- -->
`

85. Accounting (Admin & Client Level)

`{=html}
<!-- -->
`

86. Configure and manage chart of accounts.

87. Enter manual and auto-synced journal entries from loan and expense modules.

88. Bank and cash reconciliation tools.

89. Transaction history, cash flow tracking.

90. Define income/expense categories.

91. Generate accounting reports: trial balance, P&L, balance sheet.

92. Manage inter-institutional fund transfers and investor settlements.

`{=html}
<!-- -->
`

93. Staff Management

`{=html}
<!-- -->
`

94. Onboard staff with personal and job details.

95. Assign roles, teams, and branches.

96. Set targets: collections, disbursements, field visits.

97. Monitor performance against KPIs.

98. Approve/reject leave requests or field expense reimbursements.

99. Enable biometric/OTP-based login for added security.

100. Staff-level activity logs and login history.

`{=html}
<!-- -->
`

101. Clients (Borrowers)

`{=html}
<!-- -->
`

102. Register new clients via web, mobile, or assisted onboarding.

103. Capture and verify KYC documents (photo, ID, proof of residence).

104. Attach biometric (optional) or PIN for secure access.

105. Track loan activity, repayment performance, and defaults.

106. Client dashboard: view active loans, schedules, and downloadable receipts.

107. Enable document request (e.g., statement of account, guarantee letter).

108. Loan Management

`{=html}
<!-- -->
`

109. Application form builder with dynamic fields.

110. Validate applicant against eligibility criteria (income, credit history).

111. Configure loan products: interest type (flat, reducing), duration, penalty rules.

112. Automatically generate repayment schedules and due alerts.

113. Track loan from application → approval → disbursement → repayment → closure.

114. Upload legal documents, repayment agreements, and guarantees.

115. View timeline-based loan activity history.

SUBMODULES:

> Collateral Registration

116. Register movable and immovable assets.

117. Attach legal documents, valuation reports, and asset images.

118. Link collateral to one or more loans.

119. Track asset ownership transfer and return status.

> Loan Defaulters

120. Identify accounts overdue by custom thresholds.

121. Trigger automated notifications to borrowers and field agents.

122. Escalate default case to recovery queue.

123. Assign tasks to recovery officers and log outcome.

124. Tag reason for default (illness, loss of income, etc.).

> Field Officer

125. Mobile app with online/offline capabilities.

126. Register clients in the field (photo, ID capture, voice notes).

127. Record repayments and print/send digital receipts.

128. View route assignments, daily tasks, and collection targets.

129. GPS-based check-in/out for client visits.

130. Submit field reports, log challenges, and upload incident evidence.

131. Field app syncs automatically when back online.

> Investor Management

132. Create investor profiles with KYC and preferred terms.

133. Accept and allocate funds into loan pools.

134. Monitor fund utilization: active, idle, returned.

135. Track ROI and fund exposure by risk grade.

136. Auto-generate investor earnings and statements.

137. Schedule interest or principal payments.

138. Export investor performance reports by period or loan batch.

NON-FUNCTIONAL REQUIREMENTS

139. Multi-device access (responsive UI)

140. Uptime guarantee: 99.9%

141. Offline functionality for field officers

142. Language support (configurable)

143. Scalability to 100,000+ clients

INTEGRATION REQUIREMENTS

144. SMS gateway (notifications)

145. MoMo API for payment. (And other required payment channels for making transactions)

146. External KYC (optional: NIN, ID verification)

147. Credit bureau data sync (optional)

REPORTING FRAMEWORK

> The reporting engine in Versa LMS must support the following:
>
> Standardized Reports (pre-built)

148. Active clients and loan status report
149. Loan application funnel
150. Disbursement vs repayment graph
151. Loan aging report
152. Collateral asset valuation register
153. Default rate by region/branch/officer
154. Staff performance summary
155. Transaction ledger (all financial movements)

> Custom Report Builder

156. Drag-and-drop filters (date range, loan type, status, region)
157. Save and schedule reports
158. Export options: PDF, Excel, CSV
159. Role-based access to saved reports

> Scheduled Reports

160. Weekly management briefing email
161. Daily collections summary
162. Monthly defaulter heatmap

163. Quarterly investor earnings overview

> Data Sources

164. Central database and API-linked sources

165. Mobile app collection logs

166. other payment gateways

> Visualizations

167. Charts: bar, pie, line, stacked, area

168. Tables with filtering

169. Exportable visuals for board meetingsActive/inactive client report

170. Disbursement and repayment trends

171. Defaulter aging report

172. Daily collections log

173. Investor earnings report

SECURITY AND COMPLIANCE

> The Versa Loan Management System will adhere to modern best practices
> and regulatory standards to protect user data and ensure system
> integrity across all modules.

174. Role-Based Access Control (RBAC)

`{=html}
<!-- -->
`

175. Assign permissions at the feature level based on user roles (e.g., admin, loan officer, field agent, investor).

176. Limit access to sensitive data such as financial transactions and KYC documents.

177. Allow creation of custom roles for specific operational needs.

178. Include support for time-based or temporary access.

`{=html}
<!-- -->
`

179. Field-Level Encryption

`{=html}
<!-- -->
`

180. Encrypt sensitive fields like national ID numbers, phone numbers, and financial data in the database.

181. Use AES-256 encryption for data at rest and SSL/TLS protocols for data in transit.

182. Mask data for unauthorized users or roles.

183. Ensure key rotation policies and secure key management practices.

`{=html}
<!-- -->
`

184. Data Privacy and Regulatory Compliance

`{=html}
<!-- -->
`

185. Align with GDPR (General Data Protection Regulation) for data handling of EU clients.

186. Comply with local data protection regulations (e.g., Uganda\'s Data Protection and Privacy Act).

187. Allow users to request deletion or download of their data (right to be forgotten, right of access).

188. Maintain an audit trail of all data access and changes.

189. Support data residency configurations for clients who require specific hosting regions.

`{=html}
<!-- -->
`

190. Authentication and Security Protocols

`{=html}
<!-- -->
`

191. Multi-factor authentication (2FA) support.

192. Biometric or PIN login options for mobile field officers.

193. Session timeout and automatic logout features.

194. IP and device access restrictions (e.g., restrict admin access to HQ network).

`{=html}
<!-- -->
`

195. Backup and Recovery

`{=html}
<!-- -->
`

196. Daily automated backups stored in secure offsite locations.

197. Point-in-time recovery options in the event of data corruption or breach.

198. Real-time monitoring for unusual system behavior or access attempts.

Performance Expectations

> The Versa Loan Management System must deliver a seamless and
> responsive user experience across both web and mobile platforms,
> ensuring high availability and efficiency during regular and peak
> usage periods. The following expectations define the system\'s minimum
> performance benchmarks:
>
> Sub-Second Page Load

199. All critical pages, including login, dashboard, loan overview, and application forms, must load in under one second on standard internet connections.

200. The frontend should be optimized using caching, compressed assets, and lazy loading to reduce initial page weight.

201. Assets such as images and scripts should be served via a Content Delivery Network (CDN) to reduce latency.

> 2-Second Average Query Response Time

202. All database operations (e.g., loan lookups, borrower records, schedule calculations) should complete within an average of 2 seconds.

203. Complex queries must be optimized with indexing, caching, and query batching.

204. Background processing for heavy operations (e.g., report generation) to offload real-time delays.

> Auto-Scaling During Peak Load

205. The system must be hosted in an environment that supports automatic scaling based on real-time demand.

206. Resources such as database read replicas, additional application nodes, and load balancers should be provisioned dynamically during

traffic spikes.

207. The system should be able to support thousands of concurrent users without degradation in performance.

208. Real-time monitoring should trigger alerts when performance thresholds are exceeded, enabling proactive scaling.

> Additional Performance Targets

209. Mobile sync operations complete in under 5 seconds for 90% of cases.

210. Real-time dashboards refresh within 3 seconds.

211. PDF and Excel exports should generate within 10 seconds, even for large datasets.

DATA MIGRATION STRATEGY

> The Versa Loan Management System must support seamless and accurate
> migration of existing financial and customer data from legacy systems,
> Excel files, or other third-party sources.
>
> Template for Uploading Historical Data

212. Provide standardized Excel/CSV templates for importing clients, loans, payments, collaterals, staff, and institutions.

213. Templates include mandatory field indicators, data type guides, and validation rules.

214. Version control to ensure compatibility with future schema updates.

> Data Validation Engine

215. Real-time field validation during upload (e.g., incorrect date formats, missing mandatory fields, duplicate entries).

216. Error tagging and row highlighting in preview mode.

217. Batch upload validation summaries with detailed logs.

218. Rules to detect inconsistencies (e.g., payments without matching loans).

> Logs for Failed Imports

219. Auto-generate import error logs downloadable as CSV

220. or PDF.

221. Include line numbers, field names, and error messages for traceability.

222. Track who attempted the import, with timestamps and status.

> Staging and Approval Workflow

223. Uploaded data initially saved to a staging environment.

224. Admin review and approval required before committing data to production.

225. Ability to rollback or re-import corrected files.

> Data Integrity and Mapping

226. Ensure ID mappings (e.g., client IDs, loan IDs) match with system rules.

227. Option to create dummy IDs or merge conflicting records.

228. Map legacy field names to system equivalents using a guided wizard.

> Migration Support Tools

229. Preview mode to simulate import outcome.

230. Export reconciliation report comparing source vs imported records.

231. API endpoints for system-to-system migration.

> Post-Migration Testing

232. Run verification checks: record counts, totals, balance mismatches.

233. User acceptance test (UAT) checklist to confirm data accuracy.

234. Freeze migration log for audit and historical traceability.

Dashboard Requirements

The Versa Loan Management System will offer user-specific dashboards tailored to the needs of each role. These dashboards will provide real-time visibility into system operations and performance, supporting data-driven decisions.

> Admin Dashboard

235. Total active users by role

236. System usage logs

237. Total institutions onboarded

238. Alerts (e.g., data backup failure, security warnings)

239. Audit logs and most recent activity snapshot

> Loan Officer Dashboard

240. Loans applied, approved, disbursed, closed

241. Collection targets vs. actual

242. Defaulting clients & alerts

243. Upcoming loan disbursements

244. Client follow-up schedule

> Field Officer Dashboard

245. Assigned routes/clients for the day

246. Collections made (real-time sync)

247. Missed visits

248. Geo-map of last visit locations

249. Offline vs synced data ratio

> Client (Borrower) Dashboard

250. Active loan details

251. Next payment due date and amount

252. Total paid vs. balance

253. Collateral summary

254. Defaulter status (if any)

> Accounting Dashboard

255. Disbursed vs. received funds

256. Daily/weekly/monthly transaction totals

257. Expense tracking summary

258. Loan repayment summaries

259. Investor fund allocation and returns

> Investor Dashboard

260. Active investments

261. Returns accrued

262. Portfolio breakdown by risk category

263. Loan performance linked to investment

Audit Trail Requirements

The Versa Loan Management System must ensure traceability, transparency, and accountability across all system operations. An audit trail will enable stakeholders and auditors to review activities, monitor data access, and validate the authenticity of transactions.

> Core Features

264. Timestamped Logs: All significant actions (logins, edits, approvals, disbursements, etc.) are logged with exact timestamps.

265. User Attribution: Each action is associated with the specific user, device, and IP address performing the operation.

266. Activity Type Classification: Activities are grouped (e.g., financial, user management, system settings) for easier search and filtering.

> Undo & Reversibility

267. Undo Log (Where Applicable): Reversible actions (e.g., incorrect profile edits, unconfirmed disbursements) can be rolled back within defined permissions and time limits.

268. Audit Versioning: Historical versions of edited records are stored for comparison and rollback.

> Exporting & Reporting

269. Export Logs: All logs can be exported in CSV or PDF formats for offline reviews or compliance submissions.

270. Custom Filters: Admins can filter logs by user, date range, activity type, or module.

271. Log Integrity: Logs are protected from modification or deletion, ensuring forensic traceability.

> Monitoring

272. Real-time Alerts: Unusual activity (e.g., login from new location, failed login attempts) triggers alerts to admins.

273. Log Retention Policy: Define how long audit logs are retained (e.g., 5+ years), compliant with data retention regulations.

274. Audit Dashboard: Summary view for top activities, failed operations, and most active users.

RISK ASSESSMENT AND MITIGATION

> The Versa Loan Management System must be built with preventative and
> responsive risk management strategies in mind. These ensure continuity
> of service, protection of user data, and operational integrity. Below
> is an overview of the primary risk types and mitigation mechanisms:
>
> Data Loss

- Mitigation:

  274.1. Daily automated backups stored in encrypted offsite storage.

  274.2. Redundant backups across multiple locations.

  274.3. Routine backup verification and recovery testing.

  274.4. Real-time replication where applicable.

> Fraud

- Mitigation:

274.5. Multi-level transaction approval workflows (e.g., loan disbursement, staff permissions).

274.6. Real-time alerts for abnormal activity (e.g., sudden large loan approvals, backdated entries).

274.7. Field visit GPS validation.

274.8. Audit logs with tamper-proof entries.

274.9. User behavior analysis for anomaly detection.

> System Downtime

- Mitigation:

274.10. Hosting on high-availability cloud infrastructure (e.g., AWS, Azure).

274.11. Load balancers and redundant instances in different availability zones.

274.12. Use of good networks in order to reduce regional downtime impacts.

274.13. Health checks and real-time performance monitoring.

> Unauthorized Access or Data Breach

- Mitigation:

274.14. Role-based access control and encryption of sensitive data.

274.15. Two-factor authentication for admins and field agents.

274.16. IP whitelisting and device registration.

274.17. Session timeout controls and login attempt rate-limiting.

> Regulatory Non-Compliance

- Mitigation:

274.18. Regular compliance audits.

274.19. Data retention and deletion tools to satisfy legal requirements.

274.20. Transparent privacy policy and consent-based data usage.

> User Errors

- Mitigation:

274.21. Guided workflows and user prompts.

274.22. Confirmation modals for critical actions (e.g., delete, disburse).

274.23. Limited undo functionality for reversible actions.

274.24. Role-based limitations to restrict sensitive actions.

> Integration Failures

- Mitigation:

274.25. API rate-limiting and fallback workflows.

274.26. Status monitoring of third-party services (e.g., SMS gateways).

274.27. Alerting and auto-retry mechanisms.

ACCEPTANCE CRITERIA

> Functional Deployment

275. 100% of all major modules (Loan Management, Clients, Accounting, Field Officer, Investor Management) deployed and functioning as per specifications.

276. All essential submodules (Collateral, Defaulters, Reporting, Dashboard) operational and integrated.

> Mobile App Readiness

277. Mobile application tested across Android devices and syncing data accurately in both online and offline modes.

278. Field officer functions (registration, repayment recording, GPS tagging) fully supported.

> System Testing & Validation

279. All use cases covered in User Acceptance Testing (UAT) with sign-off from stakeholders.

280. No open high-priority bugs remaining in the final version.

281. Business logic tested against at least 50 simulated customer scenarios.

> Reports & Dashboard Accuracy

282. Reports accurately reflect uploaded and live system data.

283. Real-time dashboards reflect current user, loan, and repayment statistics.

284. All exports (PDF, Excel, CSV) functional and properly formatted.

> Security & Compliance

285. User roles and access permissions functioning correctly.

286. 2FA, encryption, and audit logs validated.

287. Data retention and backup features tested.

> Documentation & Handover

288. Complete technical documentation delivered (architecture, APIs,

deployment).

289. User guides for clients, staff, and admins.

290. Admin training sessions conducted.

291. Change request log closed or handed over.

> Post-Go-Live Support Readiness
